WAXIE® Multi-Task Wiping System Vs. Buckets/Rags

FEATURES	WAXIE® MULTI-TASK WIPES	BUCKETS/RAGS
Cost Effective	• Requires refill only when roll is replaced • Reduced use of test strips, towels, laundering, water and chemical	• Requires 2-4 dump/refills per 8-hr shift • Increased use of test strips, towels, laundering, water and chemical
Labor/Efficiency	• Refill solution only when roll is replaced • Requires testing only when solution is added • Disposable wipe decreases laundering costs • 100 wipes per roll makes replacement less frequent	• Requires frequent solution changes • Rags/Linen requires laundering to maintain a sanitary environment • Contaminated solution requires bucket to be washed
Cross-Contamination	• An enclosed system nearly eliminates risk of contaminated solution • Saturated, disposable wipe cleans surface without risk of using contaminated towel • Wipe is disposable and reduces the chance of spreading germs from one surface to the next	• Soiled terry placed into clean solution affects ppm • Open bucket allows evaporation and exposes solution to contamination
Health Code Regulations	• Excellent quaternary release • Synthetic fiber allows wipe to hold ppm for an extended period of time • Safe and effective for front and back-of-house use	• Terry/cotton binds Quat rather than releasing it onto the surface (aka quatbinding) • Exposure to air and soils affects terry from maintaining the proper ppm
Customer Perception	• Use of a clean wipe each time enhances the customer experience • Enclosed systems keeps customers from being exposed to harsh chemicals	• Tendency to reuse towels from table to table affects perception of cleanliness
Substrate/Bucket Features	• Wipe is large enough to clean two 4-top tables • Lid nearly eliminates evaporation • Durable labeling and clean design of bucket offers visual appeal	• Imprinted/screenprinted labeling fades from frequent washing

The Most Trusted Name In Clean. Since 1945.
