

SOLSTA FDC[™]
FLEXIBLE DILUTION CONTROL

WAXIE[®] SOLSTA FDC[™]: Flexible Dilution Control

The **WAXIE[®] SOLSTA FDC[™] (Flexible Dilution Control)** dispenser is designed to quickly change out **Solution Station[®]** products and to reduce the time spent setting up new chemicals. The dispenser features one-handed fill for spray bottles and a 7-foot remote fill gun for bucket and equipment applications.

Safety | Accuracy | Flexibility | Performance

WAXIE designs our systems to take the guesswork out of dilution control. We want to ensure the right product is hooked up to the right dilution control button so we actively reinforce this with the use of color-coding, numbers, pictures, etc. The WAXIE secondary labeling system also helps ensure spray bottles are filled used correctly (photos of the product in-use, easy-to-read labels, etc.).

In addition, these systems help prevent staff from coming in contact with the chemical when changing concentrate refills. This reduces hazards because the system, not the cleaning staff, handles the concentrated chemicals. Back flow prevention devices in the dispensers meet all plumbing codes and minimize harmful side effects such as foaming.

For more information on the dispenser, see next page.

Where can WAXIE® SOLSTA FDC™ be used?

Safely and effectively clean and disinfect educational facilities, hospitality areas, food processing areas, office buildings, government facilities, industrial & manufacturing sites and healthcare facilities. WAXIE SOLSTA is an easy-to-use, effective solution to all of your disinfecting, deodorizing, and cleaning needs!

WAXIE SOLSTA FDC FEATURES & SPECS
